LA

LinkedAuto Quick Start Guide

LinkedAuto finds people on LinkedIn and contacts them for you, slowly and safely, the way a careful person would. This guide shows you how to use it, one step at a time.

It runs at home
A real Chrome on your Synology NAS, so LinkedIn sees your normal home internet.

You stay in control
It starts paused and in practice mode. Nothing is sent until you say so.

It stops itself
Any LinkedIn warning pauses everything until you check it by hand.

You can watch it
The browser view shows the Chrome window live, inside the dashboard.

1. Log in
to LinkedIn in the browser view

2. Campaign
write your note and messages

3. Leads
add people from a search

4. Practice
press Start and watch

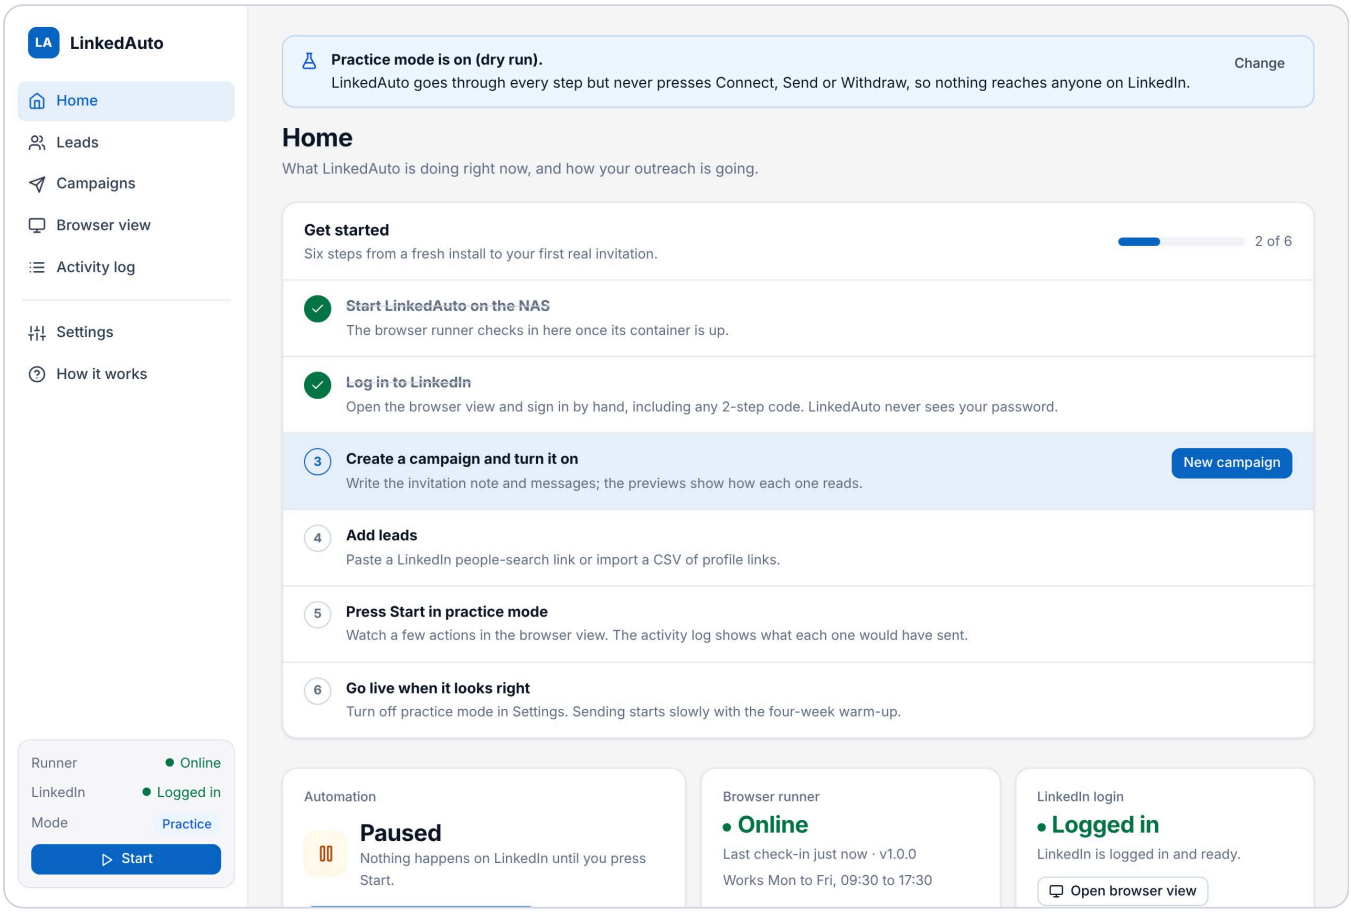

5. Go live
when it looks right

Open the dashboard

Open one of these addresses in any browser on your computer or phone.

At home	`http://192.168.0.124:3080`
Away (Tailscale on)	`http://100.111.57.41:3080`

If it asks for a login, type **any username** and your **dashboard password** (`DASHBOARD_PASSWORD` in Infisical).

The Home page on a fresh install. The Get started list shows what to do next.

What you see

Left menu: every page, one click away.

Blue bar: practice mode is on, so nothing is sent.

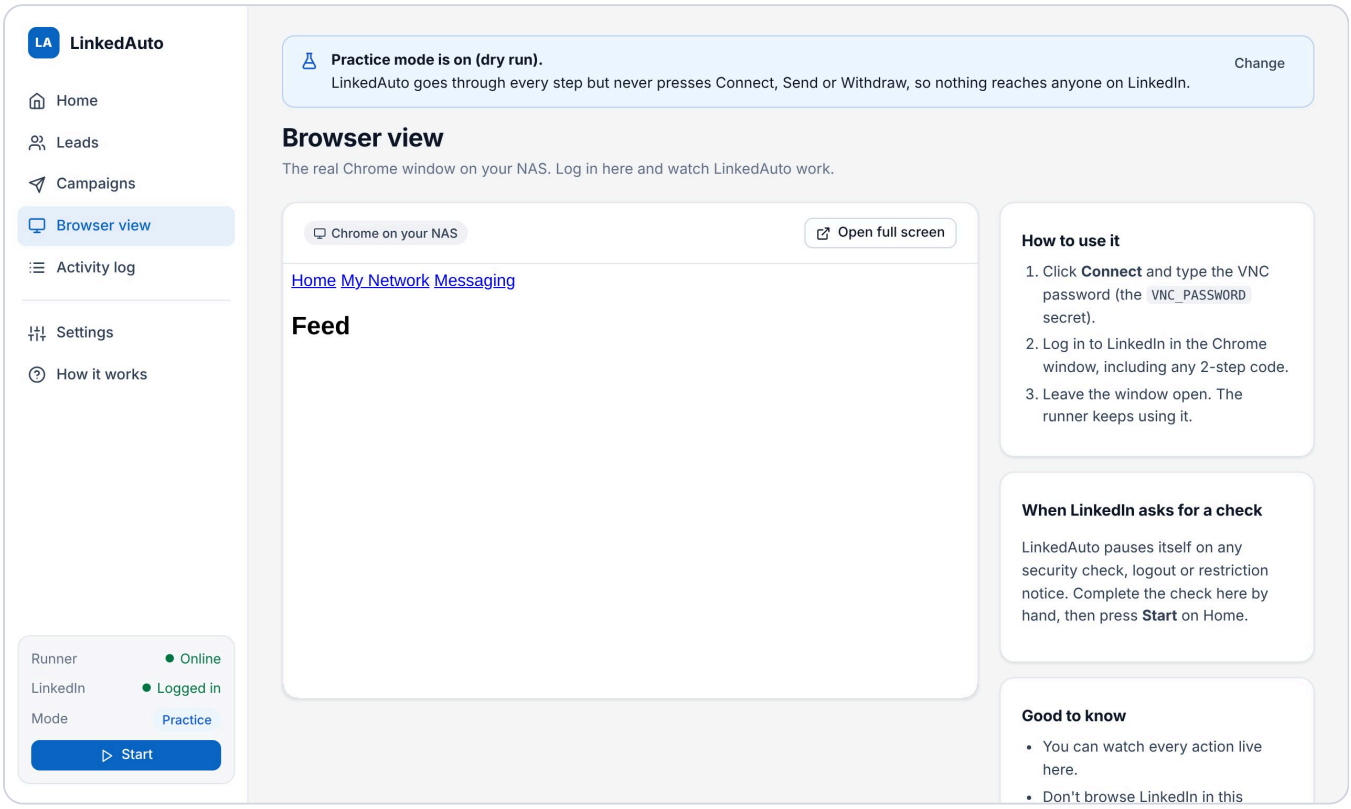

Bottom left: runner, LinkedIn login, mode, and the Start or **Pause everything** button. It is on every page.

Get started: six steps. Click the blue button on the step that's next.

1 Log in to LinkedIn

Click **Browser view** in the menu. You'll see the Chrome window running on your NAS.

1. Click **Connect** and type the VNC password (`VNC_PASSWORD` in Infisical).
2. Log in to LinkedIn in that window, the same way you always do, including any 2-step code.
3. Go back to **Home**. Within a minute **LinkedIn login** shows Logged in .

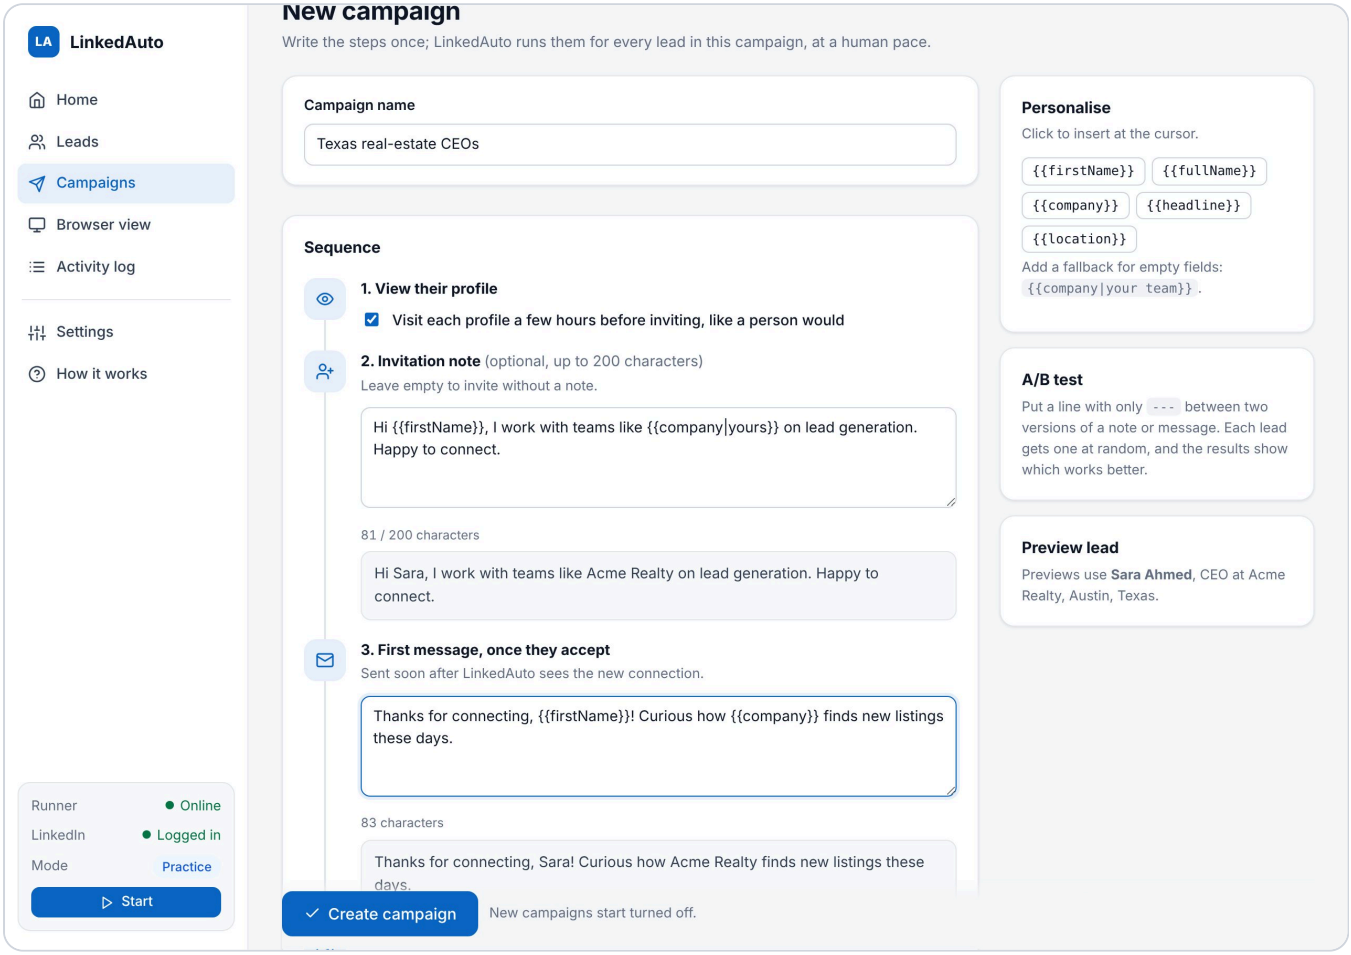

The browser view inside the dashboard. Use "Open full screen" for a bigger window.

You only do this once. Your login stays saved on the NAS. LinkedAuto never sees or stores your password.

2 Create a campaign

A campaign is the list of steps every person goes through. Click **Campaigns**, then **New campaign**.

1. Give it a name, for example "Texas real-estate CEOs".
2. Write a short **invitation note** (or leave it empty), a **first message** for when they accept, and up to three **follow-ups**.
3. Click the grey **{{firstName}}** buttons to add their name or company. The grey box under each message shows how it will read.
4. Click **Create campaign**, then **Turn on**.

The campaign editor. Previews update as you type, and the counter warns you if a note is too long.

The sequence stops by itself the moment someone replies. You never send a follow-up to someone who already answered.

3 Add leads

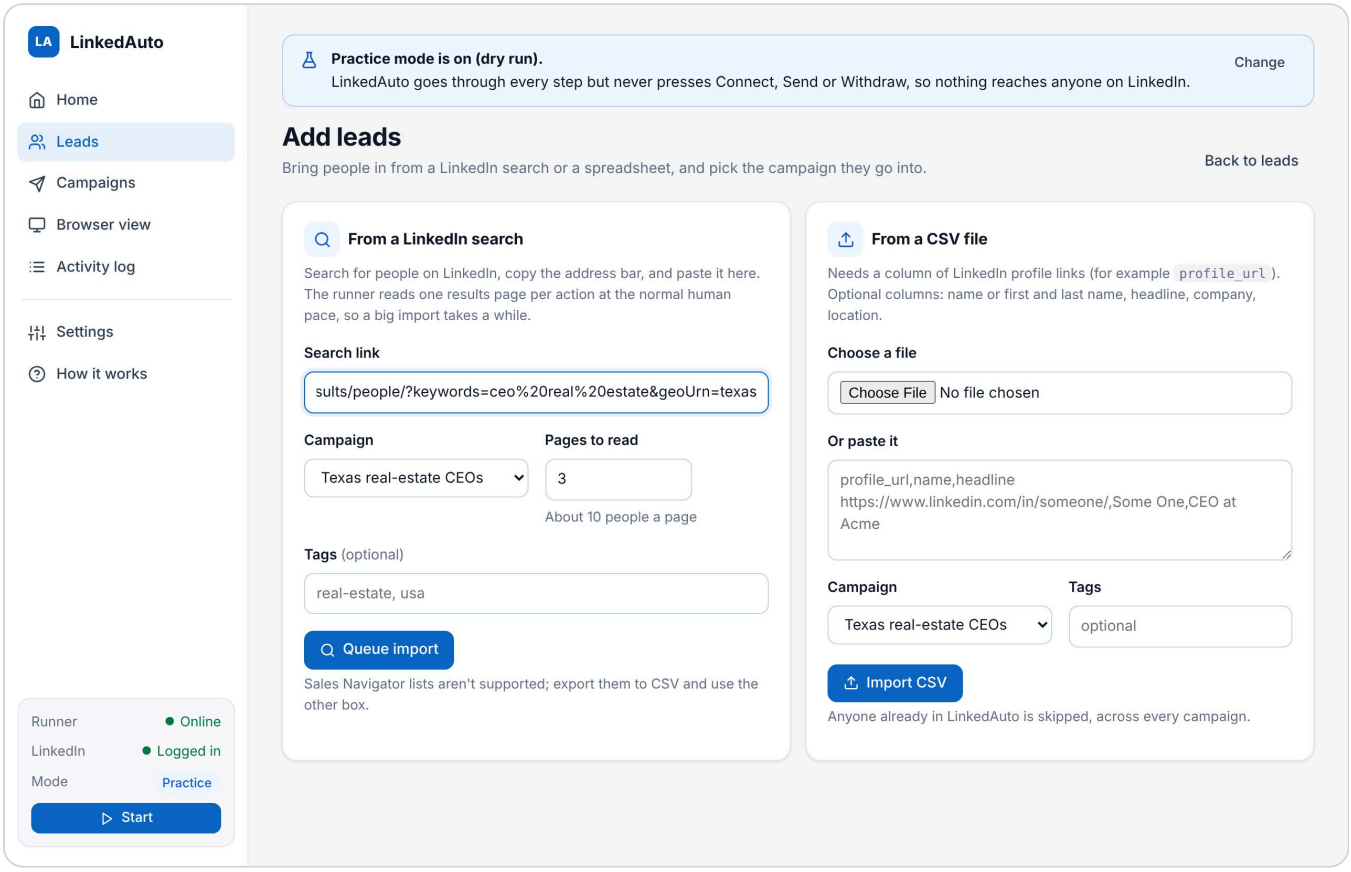

Click **Leads**, then **Add leads**. There are two ways:

From a LinkedIn search

Search for people on LinkedIn, copy the address from the address bar, and paste it in. Pick the campaign and click **Queue import**.

From a CSV file

A spreadsheet with a column of LinkedIn profile links. Choose the file, pick the campaign, and click **Import CSV**.

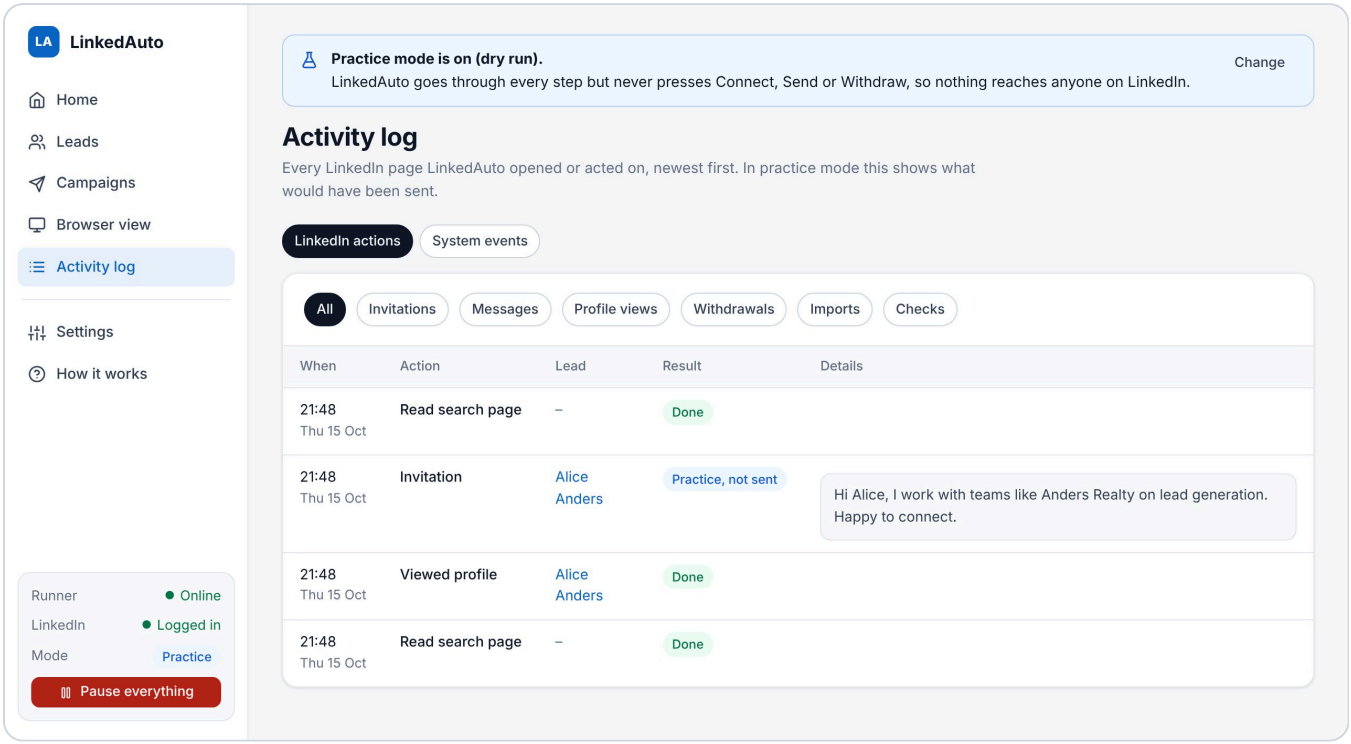

Add leads. People already in LinkedAuto are skipped automatically.

A search import only runs while LinkedAuto is started, and it reads one page at a time at a human pace, so be patient.

4 Practise first

On **Home**, click **Start in practice mode**. LinkedAuto now works through every step but **never presses Connect, Send or Withdraw**.

1. Open **Browser view** and watch it visit profiles.
2. Open **Activity log**. Each invitation and message shows `Practice, not sent` with the exact text it would have sent.
3. Check the names, the company and the wording. Change the campaign if anything reads wrong.

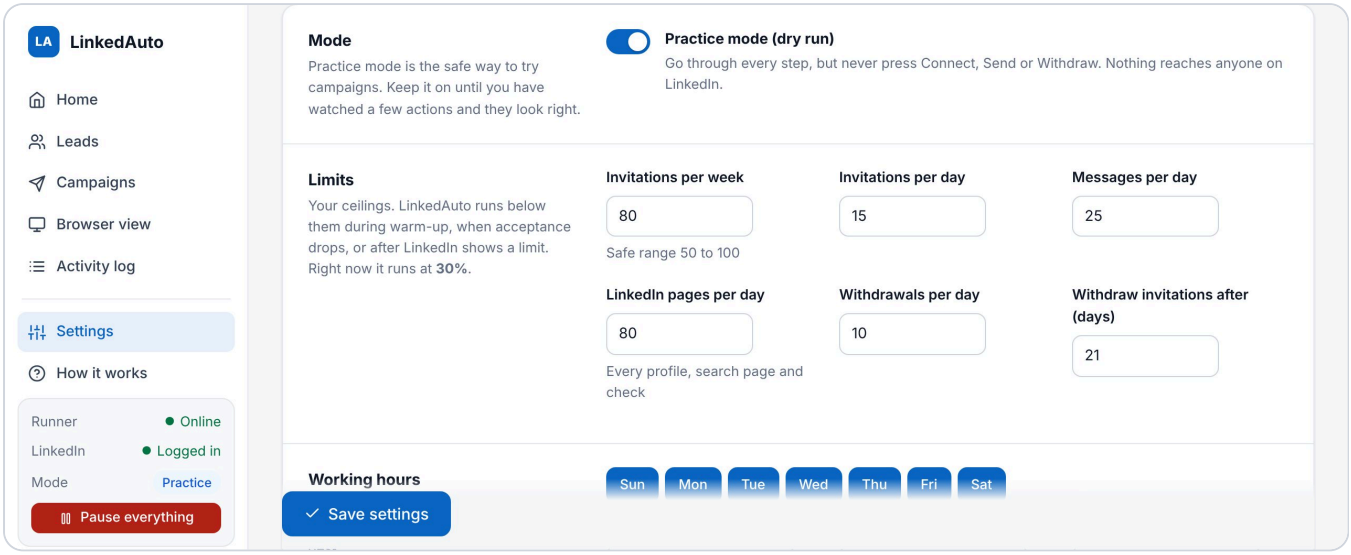

The Activity log in practice mode: you see exactly what would have been sent, and nothing was.

LinkedAuto only works inside your **working hours** (Settings; default Monday to Friday, 09:30 to 17:30, Pakistan time). Outside them, Home says it is waiting. That is normal.

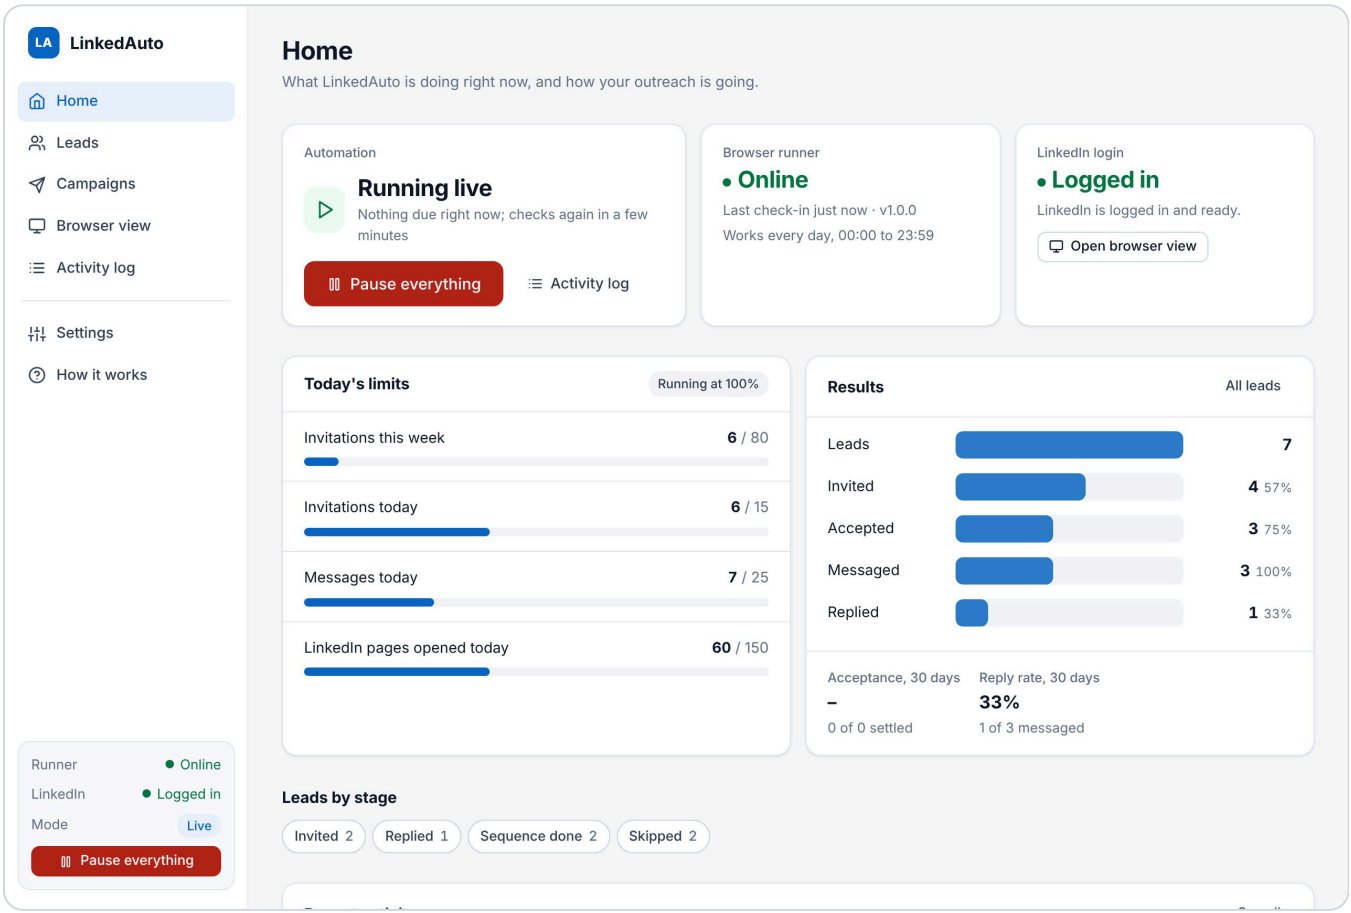

5 Go live

When the practice run looks right, open **Settings**, switch off **Practice mode**, and click **Save settings**. It asks you to confirm.

Settings, with practice mode at the top. Limits, working hours and pacing sit below it.

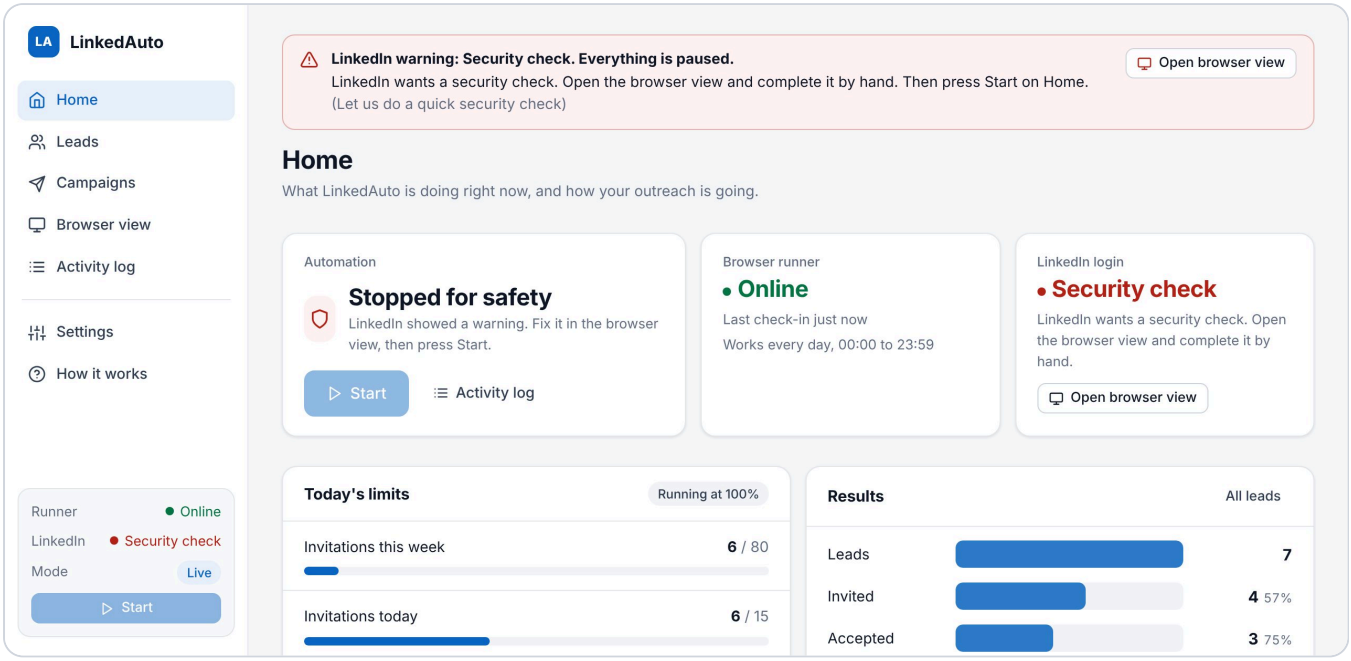

- Sending starts slowly: **30%** of your limits in week 1, then 50%, 75% and 100% by week 4.
- Default limits: 15 invitations a day, 80 a week, 25 messages a day.
- To stop at any time, click **Pause everything** (bottom left, on every page).

Home when it's running: today's limits on the left, results from leads to replies on the right.

If LinkedIn shows a warning

If LinkedIn logs you out, asks for a security check, or shows a restriction notice, LinkedAuto **pauses everything at once** and shows a red bar on every page.

The red bar after a security check. The Start button stays disabled until LinkedIn is happy again.

1. Click **Open browser view** and deal with it by hand (log in again, or complete the check).
2. If it's a **restriction notice**, stop. Read it carefully and keep LinkedAuto paused for a few days.
3. When LinkedIn is back to normal, go to Home and click **Start**.

Other things you might see

What you see	What it means	What to do
Yellow bar: runner offline	The Chrome container on the NAS stopped.	On the NAS: `docker compose ps`, then `docker compose up -d` in the app folder.
"Outside working hours"	It is waiting for your work hours.	Nothing, or change hours in Settings.
"Invitations paused until..."	LinkedIn's weekly invitation limit appeared.	Wait. It resumes by itself after 7 days with lower limits.
"Nothing due right now"	Everyone is waiting for their next step.	Add more leads, or wait for replies.

How to test it safely

There are three levels of testing. Do them in order, and only move on when the one before looks right.

Level 1. Automatic tests (already done)

The code comes with a **stand-in LinkedIn site**: a fake copy of the LinkedIn pages LinkedAuto uses. The tests run the real dashboard, the real runner and a real Chrome against it and fast-forward weeks of a campaign in a few minutes: importing, visiting, inviting, accepting, messaging, follow-ups, stopping on reply, withdrawing, LinkedIn's weekly limit and the security-check pause. All of them pass. To rerun them on a computer with Node and Postgres:

`cd app && npm test` · `cd runner && npm test` · `cd app && TEST_DATABASE_URL=… npm run e2e`

Level 2. Practice run on the NAS (no risk)

1. Check Home shows the runner **Online** and LinkedIn **Logged in**.
2. Make a test campaign and import a CSV with **2 or 3 people you know**.
3. Keep practice mode on and click **Start** during working hours.
4. Watch the browser view for a few actions. Check the Activity log says `Practice, not sent` and the text reads right.
5. Click **Pause everything** and confirm it stops.

Level 3. First real run (small and watched)

1. Agree it with Claude in the project first. Nothing goes out on real LinkedIn without your OK.
2. Turn off practice mode with only those 2 or 3 people in the campaign.
3. Watch the first invitations happen in the browser view, then check on LinkedIn itself that they arrived as written.
4. Only then add a real lead list. The warm-up keeps the first weeks small.

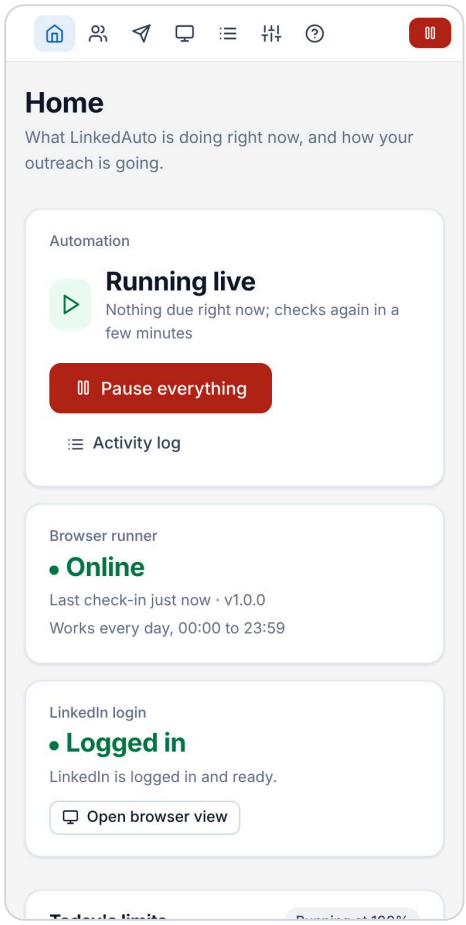

Remember: LinkedIn's rules don't allow automation tools. LinkedAuto lowers the risk (home IP, human pace, small limits, full stop on warnings) but cannot remove it. Keep the limits low.

Everyday use, on one page

Page	Use it to
Home	See if it's running, today's limits, results, and what happened recently. Start or pause.
Leads	See where each person is. Filter by stage, search, export a CSV. **History** shows everything sent to one person; **Stop** leaves them alone for good.
Campaigns	Edit messages, turn campaigns on or off, see which version (A or B) works better.
Browser view	Watch Chrome live, log in, fix security checks.
Activity log	Every LinkedIn action with its exact text. "System events" shows logins, safety stops and replies.
Settings	Practice mode, limits, working hours, pacing, warm-up.
How it works	A short version of this guide inside the dashboard.

Good habits

- Glance at Home once a day.
- Reply to people yourself on LinkedIn; LinkedAuto stops their sequence when they do.
- Pause before you use LinkedIn in the browser view window.
- Keep acceptance above 30%: short, personal notes work best.

It works on your phone too.
